- High resolution is preferred. We won't be able to make your photos larger than what you originally send us. We recommend at least 2,000 pixels wide in JPG format. If you plan on printing your photos please check with your printer to see what size they need.

- Turn on lights and open blinds to ensure a well lit room.

- Remove any clutter, wires, or debris that you do not want in the photo.

- Turn off date and time overlays on your photos and do not include any watermarks.

- Try not to stand on or close to where furniture would be placed.

- Capture as much of the room as possible by standing in the corner or doorway of the room.

- Avoid wide angle lenses that warp the room or distort the length of walls. 18-22mm lenses usually work best.

- Save photos by room name e.g. "Bedroom.jpg" or "LivingRoom-Angle1.jpg"
